

Anti-Piracy & Maritime Security

Monitor Systems design, supply and install Maritime Security Detection Systems. Our system offers a comprehensive layered security approach with onboard advance alarm warning for marine vessels, rigs, platforms and pipelines against acts of terrorism, hijacking, piracy and other violations of security wherever a vessel is operating.

Utilising perimeter sensors, infra-red tracking day/night vision cameras and onboard radar equipment, our detection system generates a secure perimeter network extending outwards from the vessel.

AN UNLIMITED NUMBER OF SENSORS OR CONTROL PANNELS CAN BE ADDED TO THE SYSTEM
